COMMERCIAL PROPOSAL

ASG Card x402 on Stellar + PayAI

Professional proposal for agentic commerce: monetize AI-agent API calls through x402, settle in USDC on Stellar, and orchestrate facilitator-based payment verification with PayAI.

What is ASG Card

ASG Card is payment-to-card infrastructure for AI agents. It converts paid API actions into immediate virtual card issuance and funding so agents can execute spend safely and programmatically.

x402-native Virtual Cards API

USDC on Stellar PayAI facilitator path

How it works

1. Agent requests a paid action: call card create/fund endpoint.

2. x402 challenge + payment: PayAI path verifies payment intent and execution.

3. Settlement: USDC settles on Stellar and payment is confirmed.

4. Card response: ASG Card issues/funds card and returns details plus controls.

Expanded Use Cases

- **OpenClaw autonomous ops:** agents buy APIs/compute/data in real time with policy-bound cards.
- **OpenClaw runbooks:** per-task cards for cloud/GPU budgets with audit trails.
- **Agentic procurement:** enterprise bots handling SaaS renewals and subscriptions.
- **B2B API monetization:** pay-per-action commerce with deterministic x402 settlement.
- **Cross-border teams:** centralized USDC treasury with distributed card execution.
- **Marketplace agents:** autonomous checkout and vendor payout orchestration.

Examples can be replicated for OpenClaw and similar agent frameworks.

Target Users (ICP)

- Teams shipping agentic products (OpenClaw and similar stacks).
- API platforms launching paid agent endpoints.
- FinOps/operations teams requiring spend controls and traceability.
- Treasury/compliance teams adopting USDC settlement rails.
- Ecosystem and growth teams at Stellar and PayAI.

VALUE BY PLATFORM

PLATFORM	VALUE	WHY IT MATTERS
Stellar	USDC settlement growth plus brand leadership in agentic commerce.	Positions Stellar in the core agentic narrative and shows it is shipping with the trend, not reacting to it later.
PayAI	Facilitator adoption in production-grade partner flows.	Creates a visible reference integration for x402 monetization and orchestration.

PLATFORM	VALUE	WHY IT MATTERS
ASG Card + Partners	New transaction revenue stream with low integration friction.	Faster pilot-to-scale conversion with measurable payment and usage KPIs.

Suggested Pilot Structure

1. **Phase 1 - Strategy & Design:** select priority use cases (OpenClaw + 1-2 additional), define success criteria, compliance scope, and economics model.
2. **Phase 2 - Integration & Sandbox:** connect x402 endpoints, facilitator flow, Stellar settlement checks, and observability baseline.
3. **Phase 3 - Controlled Pilot:** launch limited partner cohort with transaction caps, approval policies, and KPI dashboards.
4. **Phase 4 - Commercial Scale:** finalize pricing/GTM package, publish references, and expand to additional target users.

Primary CTA: Approve Phase 1 and start a joint pilot track with shared success metrics across product, BD, and operations.
